

Jake Snow

Front-End Software Developer

About Me

I discovered my passion for coding while learning more about computers. After building my first PC, I shifted my focus from hardware to software. This fascination led me to delve into Front-End development, through self-teaching.

Projects

Ultimate Tier List

A webpage where you can rank images based on whatever you want.

[Code](#) | [Live Demo](#)

- Created with React.
- API used to get images to be ranked.
- Unique feature of adding columns to a tier list.
- Uses drag and drop functionality.

Netflix Clone

A webpage that emulates Netflix's website.

[Code](#) | [Live Demo](#)

- Built using the framework React.
- API used to fetch real movie data, ensuring the content is always up-to-date.

Landing Page

A responsive landing page for a security company.

[Code](#) | [Live Demo](#)

- Advanced CSS techniques used, including but not limited to:
 - ➔ Root variables
 - ➔ Utility classes
 - ➔ Media queries
